

In this Block of 3 ha, there are thirty two species which includes six climbers, sixteen herbs, one shrub and nine trees. The Block still has number of indigenous species but slowly gradually invaded by species like *Lantana camara* and *Nepeta suaveolens*. Important aspect of this Block is that it zone has annual rivulets along which rare species like *Dolichandrone falcata* and few tall trees of *Trewia polycarpa*, *Sterculia urens* and other species are growing. The site is good source of natural germplasm for propagation of indigenous species.
